Hidden Woofer Options

Since its inception, James Loudspeaker has been an application driven brand providing solutions to integrators, designers, and architects. But an integrator said it best – “James Loudspeaker isn’t just a speaker brand - it is a toolbox for the custom installers.”

Since over 95% of our enclosures are hand fabricated from aircraft/marine grade aluminum, we can custom fabricate any shape or size system to match your indoor/outdoor needs.

Nine PowerPipe SubWoofer Options

By taking input from our dealer base, we've assembled an impressive number of options when the need for a hidden subwoofer solution comes up in a job. We have over 26 models, plus the option for "one-off" custom designs based upon a dealer request for something completely unique.
